The night's runs, in order (2026-10-04, UTC)

Ordered sequence, spacing not to scale. Every run was recorded per call and replayed afterwards

load test · agents · fleet changed, then restored · stopped / failed attempt

Before every run: the Exp-0 health gate (both replicas, slots, KV size, metrics) had to pass. After every change to the fleet (H1, P/D, memory), the normal fleet was restored and the gate passed again.
